JUL 25 2008

1. (previously presented) A self-service terminal comprising:  
a plurality of separate media modules, each media module being operatively associated with a separate pick mechanism for picking media from the media module and transferring the picked media to a media dispense path, at least a first one of the media modules being associated with a separate vacuum pick mechanism, and at least a second one of the media modules being associated with a separate friction pick mechanism.
2. (previously presented) A self-service terminal of claim 1, wherein the media modules are removable and interchangeable.
3. (previously presented) A self-service terminal of claim 1, wherein the at least a second one of the media module associated with the friction pick mechanism is a friction pick module and the friction pick mechanism is contained within the friction pick module.
4. (previously presented) A self-service terminal of claim 3, wherein the friction pick module comprises a plurality of friction pick units, each unit including a media container and a friction pick mechanism.
5. (previously presented) A self-service terminal of claim 4, wherein the friction pick units share a common media exit path within the media module and leading to the media dispense path.

6. (previously presented) A self-service terminal, comprising:  
means defining a media dispense path; and  
a plurality of separate media modules, each media module being operatively associated with a separate pick mechanism for picking media from the media module and transferring picked media to the media dispense path, at least a first one of the media modules being associated with a separate vacuum pick mechanism and at least a second one of the media modules being associated with a separate friction pick mechanism.
7. (previously presented) A self-service terminal of claim 6, wherein the media modules are removable and interchangeable.
8. (previously presented) A self-service terminal of claim 6, wherein the friction pick mechanism is contained within the media module associated with the friction pick mechanism.
9. (previously presented) A self-service terminal of claim 8, wherein the media module associated with the friction pick mechanism comprises a plurality of friction pick units, each unit including a media container and a friction pick mechanism.
10. (previously presented) A self-service terminal of claim 9, wherein the friction pick units share a common media exit path which is within the media module and leads to the media dispense path.

11-14. (canceled)
